

Water dispenser, sparkling water system PearlMini (Cornelius)

Product description:

PearlMini is a powerful water dispenser that delivers chilled still, medium, or sparkling water.

Discover a convenient and cost-saving solution for you and your family! Say goodbye to inconvenient shopping, carrying heavy water bottles, and the need to store them. Our water dispenser provides fresh, chilled drinking water in still, medium, or sparkling variations - with an impressive performance of up to 20 liters per hour. Enjoy the freedom and convenience that the **PearlMini** device offers. Not only will you save valuable time, but also precious space in your home or office. And the best part? You'll also save money, as you no longer need to buy expensive bottled water. Treat yourself to the pleasure of enjoying fresh and refreshing water directly from our water dispenser and add a touch of luxury to your daily drinking ritual.

The device is made of high-quality components and seamlessly blends into any space with its appealing design. **PearlMini** is a tabletop device and does not require under-counter installation.

***Good to know:** **PearlMini** is compatible with **Aqua Business** - a water filter that supplies the device with crystal-clear water. **PearlMini** can also be operated with tap water, but we strongly advise against this option. We believe that drinking water is only meaningful when the water is properly treated and protects the components of the water dispenser, thereby extending the system's lifespan.

Thanks to this solution, you can enjoy pure, healthy, chilled, and sparkling water!

Technical specifications:

- Device type: Countertop unit
- Soda water for 10 to 25 people
- Dimensions of PearlMini (HxWxD): 408 x 265 x 560 mm
- Cooling capacity: 20 liters/hour at a delta T of 6 °C
